

2/2-way solenoid valve, article 252-VA -direct operated- diameter G 1/4"

Force pilot operated solenoid valves start from 0 bar and do not require a pressure differential between the upstream and downstream pressure. During energizing the magnetic coil lifts the sealing element from the valve seat and opens the flow hole. The valve closes by spring force. By default these solenoid valves are designed with the **-normally closed-** function. With the design of the **-normally open-** type usually reduces the maximum closing pressure. The flow direction is indicated by an arrow on the housing, the position of the solenoid valve coil should preferably be upright.

Connections

Both sides with female thread acc. to DIN ISO 228 (BSP)

Viscosity ≤ 20 cSt (Centistocks)

Solenoid valves should only be used with clean, liquid or gaseous media. For low contamination we recommend the use of an upstream strainer.

valve closed
magnet coil currentless

valve opened
magnet coil energized

	ambient	to max. +50°C
	diaphragm	medium temperature
	NBR:	-10°C ... +80°C
	EPDM:	-10°C ... +130°C
	FKM:	-10°C ... +120°C

Schaltfunktion/Function:
in Ruhstellung gesperrt - NC.
normally closed - NC.

Connection diagram:

clamp: 1 (N) blue
clamp: 2 (L) black/brown
clamp: \ominus (PE) green/yellow

- design : poppet valve
- electrical part : plug socket acc. to DIN EN 175301-803, Form A
- supply voltage : 230V 50Hz AC voltage, 24V DC voltage
- voltage tolerance : +/- 10% acc. to VDE 0580
- power consumption : 230V 50Hz AC : 15 VA / 24V DC : 18 Watt
- duty-cycle : 100% ED
- protection class : IP65 with mounted plug socket
- mounting position : optional
- pressure range : see selection table

2/2-way solenoid valve, article 252-VA -direct operated- -normally closed- diameter G 1/4"

Valve options:	
free of oil and grease	
special connection	NPT
